

Strategy summary

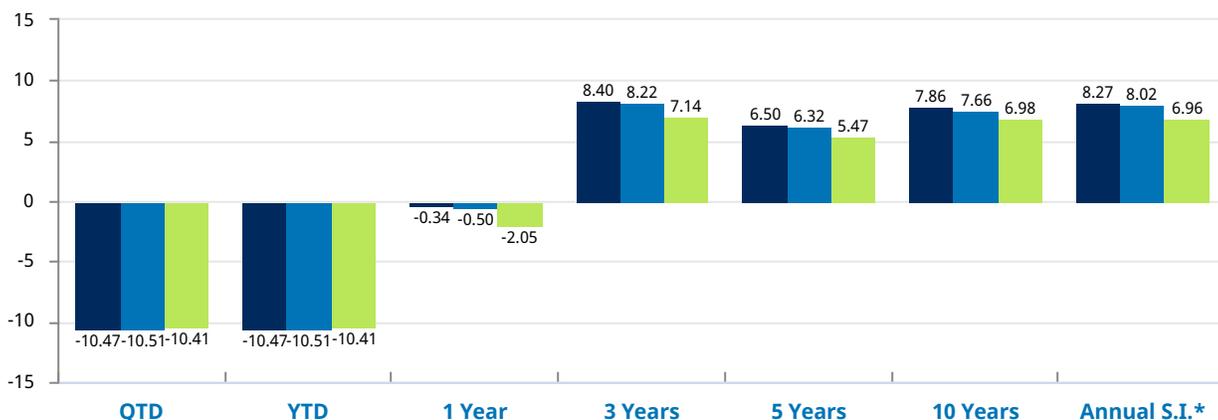

The Schroder Value Long Duration strategy uses a value-driven approach and seeks to generate returns by investing in a portfolio of investment grade, fixed income securities. The strategy is based on the premise that pricing inefficiencies exist in the market and the ability to identify those leads to superior investment performance. The portfolio management team believes that purchasing undervalued bonds and selling them once they are fully-priced rewards investors and therefore focuses on identifying investment grade bonds or sectors whose valuations have become dislocated from the underlying fundamentals, primarily due to technical reasons. Sector and security weightings are made independent from the benchmark and the strategy's positioning reflects the portfolio management team's value approach, as well as the attractiveness of the opportunities relative to the broad market.

The strategy typically invests in US dollar-denominated fixed income including governments, corporate bonds, sovereign and supranational entities, as well as municipal bonds. There is no exposure to currency risk, high yield bonds or emerging market debt.

The strategy seeks to outperform the benchmark by 100 basis points* gross of fees per annum over a market cycle using our value-driven approach and investing in investment-grade fixed income securities.

*There can be no guarantee that any investment objectives or outcomes will be achieved.

*Inception July 1, 2002
The Benchmark for the strategy is the Bloomberg Barclays US Long Gov/Credit Bond Index. Past performance is not a guide to future performance. The value of an investment can go down as well as up and is not guaranteed. Please refer to the disclosures at the end of the document for important information about the composite. Performance for periods greater than 1 year is annualized. All data and statistics as of March 31, 2021.

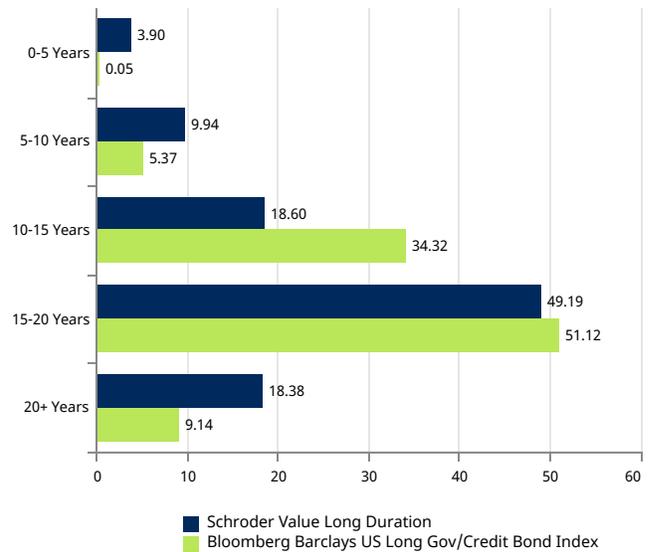

Key features

- Value-driven, opportunity based investment process
- Portfolio of investment grade bonds only, with no interest rate forecasting or currency speculations
- Investments are chosen based on relative value without reference to qualitative content of the benchmark
- Sector allocation and security selection are the main sources of generating return
- Daily interaction among key decision makers to evaluate opportunities and relative value

Source: Schroders, Bloomberg Barclays as of March 31, 2021. The portfolio characteristics shown for the strategy are based on a representative account and the percentage measurements are based on relative market values. These characteristics are subject to change, should not be viewed as an investment recommendation and may vary among individual accounts within the strategy. Data may not add to 100% due to rounding.

Sector breakdown: Gov't Related includes Agency, Sovereign, and Supranational bonds. Sectors are mentioned for illustrative purposes and not as a recommendation to buy/sell.

Credit quality breakdown: The data is shown as a percentage of market value. Credit quality breakdown reflects the average of the credit ratings assigned by S&P, Moody's, and/or Fitch. If only two of the three agencies rate the security, the lower rating is used to determine the rating classification. For example, a bond rated A1/AA- by Moody's and S&P, respectively, would be included in the single-A quality tier.

Top ten holdings: Securities listed are shown for illustrative purposes and not to be considered a recommendation to buy or sell. The top ten holdings are based on a representative portfolio within the composite. Cash and cash equivalents are excluded from the calculations. These holdings are subject to change and should not be viewed as an investment recommendation. It should not be assumed that any of these holdings were or will be profitable.

Schroder Value Long Duration Composite

Composite disclosures as of: December 31, 2019

Definition of the Firm

The Firm is defined as all accounts managed by Schroder Investment Management in the US, UK, Switzerland, Singapore, Hong Kong, Japan and Australia by wholly owned subsidiaries of Schroders PLC. Accounts managed by Schroders Adevq are excluded, Schroders Adevq claims compliance separately. Assets managed against a liability driven mandate or invested in direct property are excluded from the GIPS Firm. Advisory portfolios signed to Schroders Investment Management Hong Kong (SIMHK) are also excluded from the GIPS Firm. On January 1, 2017 the Schroders Investment Management GIPS Firm ("the Firm") was formed following the merger of independent regional Schroders Investment Management (SIM) GIPS Firms defined based predominantly on location of the investment desk and held out to clients or prospective clients as the following distinct firms: combined London/New York/Zurich (SIMUK/US & SIMSAG respectively), Singapore (SIMSL), Hong Kong (SIMHK), Australia (SIMAL) and Japan (SIMJP). These Firms were merged as a result of the increasingly global nature of the business, details of previous firm mergers are available upon request.

Composite Definition

The Schroder Value Long Duration Composite (the "Composite") follows a value approach and consists of all discretionary, long duration, tax-exempt, fixed income accounts benchmarked to the Barclays Long Government/Credit Bond Index or a similar index and invested in fixed income securities denominated in US Dollars. In accordance with the Firm's account inclusion/exclusion procedures, to be included in the Schroder Value Long Duration Composite a portfolio must be fully invested, deemed discretionary and have a minimum beginning market value of \$30 million. From inception through March 31, 2007, for a portfolio to be included in the composite it must have had a minimum beginning market value of \$30 million and a portfolio was removed from the composite when its beginning market value fell below \$15 million. Beginning August 1, 2010 and ending December 31, 2013, portfolios that limited purchases to bonds rated in the A category or better were removed from this composite as the ability to purchase securities within all rating categories of our investment-grade universe became an important part of the investment strategy. The Schroder Value Long Duration Composite inception date is July 1, 2002 and it was created in July 2002.

On November 1, 2014 the composite changed name from STW Long Government/Credit Composite to Schroder Value Long Government/Credit Composite, this was to reflect a firm merger. There was no change to investment strategy.

The benchmark for the Schroder Value Long Duration Composite is the Barclays Long Government/Credit Bond Index.

Composite Construction

A portfolio will be included in the composite on the first day of the first calendar month that it meets the composite inclusion criteria. Discretionary portfolios are those not subject to material client-imposed investment restrictions which hinder or constrain the investment management strategy Schroders would otherwise apply. A portfolio will be removed from the composite when its beginning market value falls below the 5% threshold of the minimum beginning market value and it will be excluded for that entire month and until it exceeds the threshold. If a portfolio is removed from a composite, its prior history remains in the composite. The results have been prepared and presented in compliance with GIPS®.

Performance Calculation

Schroders reports annualized, annual and periodic returns, from the composite inception, calculated on a monthly basis and geometrically linked. Monthly composite returns are calculated by weighting each account's monthly return based upon beginning market values. Policies for valuing portfolios, calculating performance and preparing compliant presentations are available upon request.

Fee Calculation

The fee schedule is the annual rate of: 0.375% of the first \$30 million; 0.250% of the next \$70 million; 0.125% of the next \$400 million; 0.100% of the next \$500 million and 0.080% of the balance. Schroders generally combines assets of the same and related clients for purposes of determining fees. Fees are billed quarterly in advance or arrears.

Fee Treatment

Performance results can be presented both net of fees and/or gross of fees. "Net of fees" performance results are net of management fee. Clients with accounts in the composite incur other expenses in connection with their accounts such as custody fees and other costs. "Net of fees" composite returns may not be reflective of performance in any one particular account. The management fee will reduce client returns for performance results that are presented gross of fees. Investment management fees are based on the total market value, including accrued interest, of the assets under management as calculated by mutual agreement with the client. Actual fees are used in the calculation of net of fee returns.

Dispersion

Internal dispersion is calculated using asset weighted standard deviation of all portfolios where there are at least 5 portfolios that are included in the composite for the entire year.

GIPS Compliance and Verification

Schroder Investment Management ("the Firm") claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS standards. The Firm has been independently verified for the periods 1st January 1996 to 31st December 2019. The verification report(s) is/are available upon request. A firm that claims compliance with the GIPS standards must establish policies and procedures for complying with all the applicable requirements of the GIPS standards. Verification provides assurance on whether the firm's policies and procedures related to composite and pooled fund maintenance, as well as the calculation, presentation, and distribution of performance, have been designed in compliance with the GIPS standards and have been implemented on a firm-wide basis. Verification does not provide assurance on the accuracy of any specific performance report. GIPS® is a registered trademark of CFA Institute. CFA Institute does not endorse or promote this organization, nor does it warrant the accuracy or quality of the content contained herein. A list of descriptions for composites and limited distribution pooled funds is available upon request. A list of broad distribution pooled funds is also available. Additional information regarding policies for calculating and reporting returns is available upon request.

Additional Information

The exchange rates used are provided by WM. Each currency is valued at 4 pm UK time on the last business day of the month. Additional information regarding policies for valuing portfolios, calculating and reporting returns and a description of all composites are available on request.

Risk Statistics

Standard Deviations for composite and its benchmark that have not been active or in existence for 3 years or more are not provided in the presentation.

Part periods are not annualized. ³ Since Inception 6/30/2002 ⁴ Since Dec 31, 2003 Total Firm Assets include non-fee paying accounts. 2003 Total Firm Assets value has been restated due to the inclusion of those non-fee paying accounts. Total Firm Assets incorporate firm mergers as detailed in the Definition of the Firm Manager accounts are included in the Total Firm Assets

* Returns are for a part period year

N/A - Information is not statistically meaningful due to an insufficient number of portfolios for the entire year

Team highlights

- Team manages approximately \$30 billion of fixed income assets, of which approximately \$5 billion is in the value long duration strategy
- Disciplined approach to long duration strategy since 1980
- Seven member portfolio management team has over 20 average years of experience
- Investments are team managed, and portfolio management and credit research are an integrated function
- Access to team of global credit analysts utilizing a rigorous research process that combines fundamental and relative value assessment

Source: Schroders, as of March 31, 2021.

Risk disclosures

All investments involve risks including the risk of possible loss of principal. The market value of the portfolio may decline as a result of a number of factors, including interest rate risk, credit risk, inflation/deflation risk, mortgage and asset-backed securities risk, US Government securities risk, foreign investment risk and liquidity risk. Frequent trading of the portfolio may result in relatively high transaction costs and may result in taxable capital gains. Duration is a measure of volatility expressed in years. The higher the number, the greater potential for volatility as interest rates change.
